

Viz animations

Viz animations help you see and understand your changing data. It's easy to track the logical steps behind data's evolution and tell powerful data stories. Sorting, filtering, adding fields, and other actions will now smoothly animate your visualizations.

2020.1 Feature Highlights

Dashboard Extensions

With extensions, you can create more customized visualizations. We are now supporting the Image Map Filter, Single Checkbox Parameters, and Filter Bookmarks extensions on Tableau Public. These extensions are available for download in our [Extension Gallery](#).

More Features

Automatic mobile layouts

Build mobile-friendly dashboards in seconds with automatic phone and tablet layouts. Use the layouts as they come, or customize further to create the best mobile experience for your dashboard.

Google Sheets

In Tableau Public we want you to be able to access your data wherever it's stored. That's why you can connect directly from Tableau Public to Google Sheets. And if your Google Sheets data updates, you can set your viz to auto-refresh as often as once per day.
